X-POWER
WATER PUMPS

X-Power project

On the top of our project, there is the custode:

He must be sure to buy a guaranteed product.
We advise, follow, and assist the customer before and after the sale.

Our dealers share the goal of working offering the best solutions on the market.

X-Power stands for reliability.

We only offer innovative products and reliable, that find wide acceptance in diy stores, in hardware and in heating & plumbing shops.

On the basis of our brand, there is also the support of professional sellers:

Thanks to the experience and expertise of our team, we provide a high service quality!

NOTE:

X-Power MAX 6 submersible pumps

Description

The X-Power Max 6 submersible pumps are technically advanced products. The use of the best materials, the construction techniques and the strict testing, guarantee the realization of an electric pump suitable for heavy use.

The X-power MAX 6 Watercooled submersible pumps are used for pumping water from wells. Thanks to their characteristics, these submersible pumps are widely used in aqueducts, and agricultural or industrial applications. They are also ideal in many other sectors where it is necessary to guarantee maximum operating reliability.

Their construction allows easy maintenance, thanks also to the mounting system with opposing impellers.

The reinforced thrust system of the engine, and the use of self-lubricating components to water, and that of the chrome bushes, allow the use H24.

The installation of MAX 6 pumps with submersible motors 6C gives the motor part a high resistance to stray currents. Moreover, with this union it is possible to install under a head of water up to 150 meters.

The 6C watercooled x-power submersible motors are environmentally friendly and characterized by high durability and electrical resistance. Unlike oil-cooled motors, water cooled motors do not require the use of substances harmful to the environment.

Designed to work in continuous service (24 hours a day), they maintain unaltered the efficiency, performance, and durabilità.

The operating characteristics are guaranteed according to the ISO9906 Upgrade two regulations.

Detail of the suction

X-Power MAX 6 submersible pumps

Advantages of the range

Ecological

(water cooled electric motor)

Working H24

Designed to work 24 hours a day (365 days a year)

Resistant

(anti-wear chrome bush)

Efficient

(high efficiency electric motor)

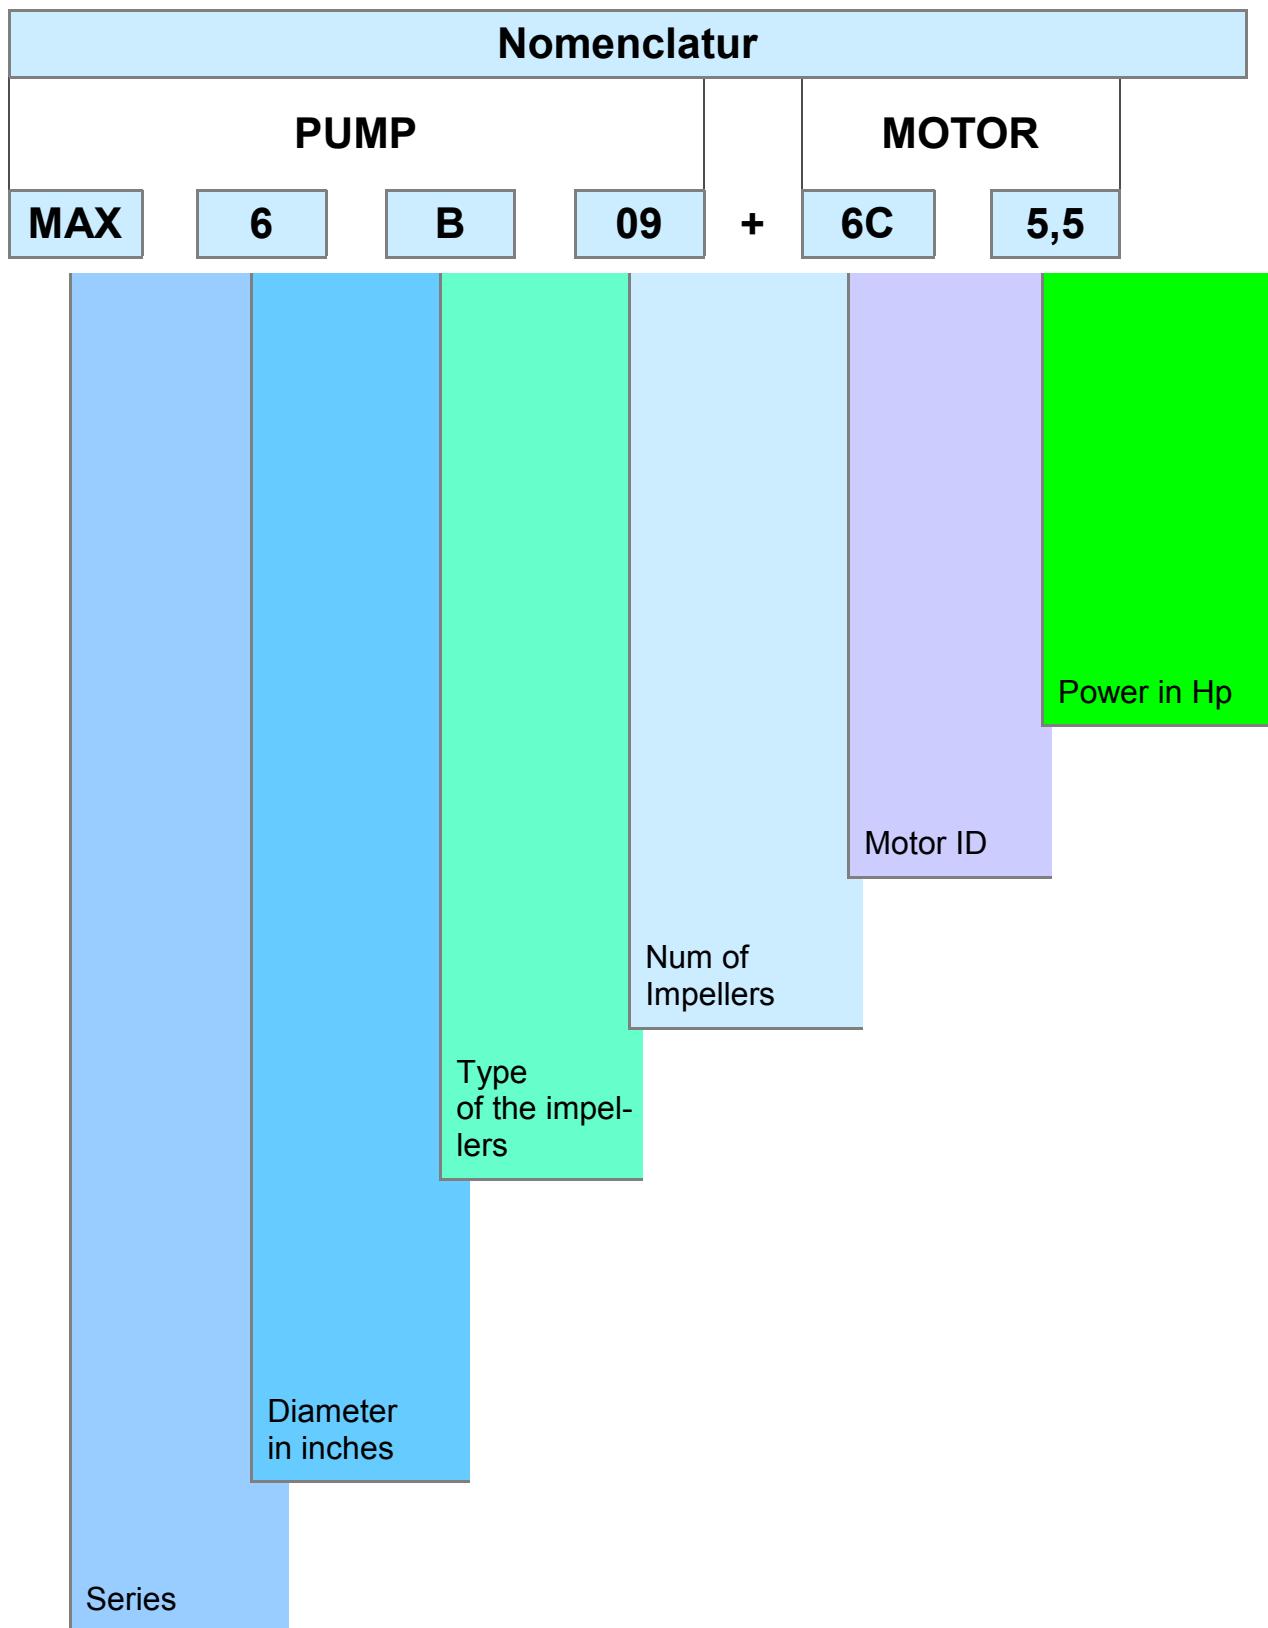

Guaranteed

(3-year warranty on the hydraulics)

X-Power MAX 6 submersible pumps

6C

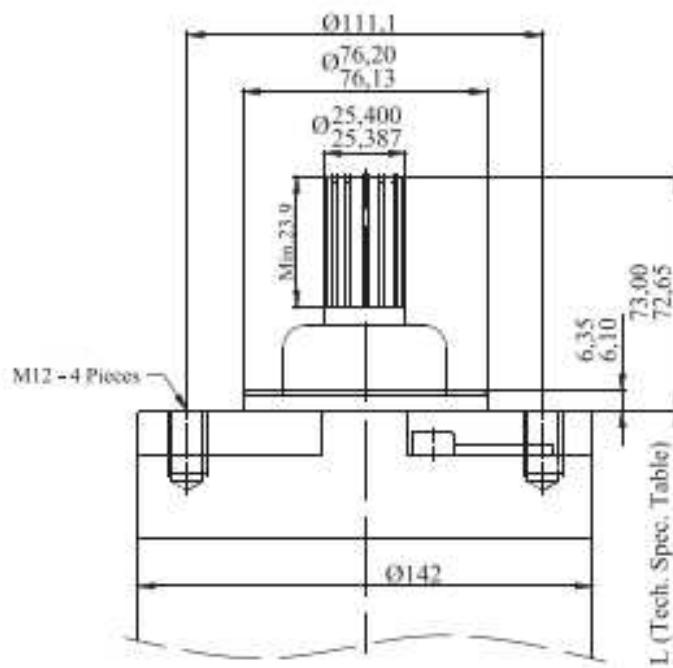

6C watercooled submersible motors

Motor components

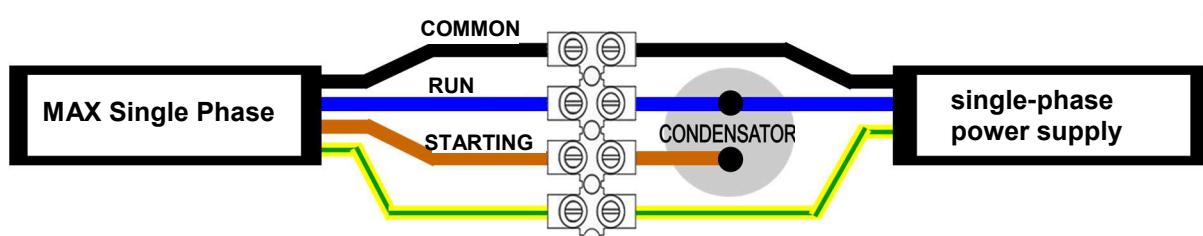

Image	Description
	Heavy duty bearings have a high pushing capacity and offer the possibility to rotate on both sides. They have an higher thrust-load capacity.
	The radial bearings in carbon tanks to their channels allow a perfect lubrication and a better sliding on the axis.
	The chromed bushings for bearings have a great importance in supporting rotor thrust.
	The anti- sand resistant mechanical seal system provides the protection class of IP68; This optional system is used to prevent the motor from sand and other solids, and therefore it guarantees a long service life to the bearings.
	The control valve balances pressure changes within the motor. When the pressure increases, it pushes the water out of the motor. When the pressure decreases, it filters the water inside and makes it enter the motor.
	The power cord is easy to assemble and remove. The connection of the power cable to the motor is made by the cable gasket and the seal cover.
	The slinger (or para sand) is the first protection of the motor from sand. It helps prevent sand from entering the mechanical seal inside the motor.
	Thanks to the adjustment screws, the height of the shaft can be precisely adjusted from the base of the thrust bearing.
	The bronze rings provide better operating conditions for the motor. They absorb the Up-Thrust loads thanks to their design and to the channels designed to make the water flow smoothly.
	The membrane gasket minimizes expansion pressure caused by heating of the cooling water inside the motor.

EXPLORING WARRANTIES AND PRODUCT LIABILITY

The guarantee starts from the date shown on the proof of purchase (receipt, invoice).

For every malfunctioning product, the customer's or the retailer's must contact us to arrange the intervention of an authorized technician; or it must proceed with the withdrawal for checking the status of the product.

In case of warranty validation, the costs of collection, verification and Return of the product are free for the customer.

The materials must be strictly accompanied by a receipt or invoice, otherwise the check must be excluded.
